

XEO Dial

Quick Start Guide

Get started

XEO Dial is a wireless controller for your XEO 202 speakers. Attach it to either speaker to pair automatically, then take control with a turn, tap or swipe.

Setup takes just 1-2 minutes.

Attach Dial to either highlighted area.

Pair Dial with your speakers

1. Connect both XEO 202 speakers to power and turn them on.
2. Attach Dial to the magnetic charging area on either speaker, as shown. Dial turns on and pairs with your speaker system automatically.

Adjust the volume

From the standby screen or the **Now Playing** screen, turn the Dial to adjust the speaker volume.

Turn slowly for fine adjustments in **1% steps**, or quickly for larger adjustments in **10% steps**.

Mute temporarily

To mute the speakers briefly, cover Dial completely with your palm. Lift your hand to restore the previous volume.

Everyday controls

Choose an input

Swipe left or right to the **Input** screen. Turn the Dial or tap an icon to switch inputs.

Choose from **USB Audio Transmitter**, **Bluetooth** or **RCA** (wired input).

Set the speaker lighting

Swipe left or right to the **Lighting** screen. Turn the Dial or tap an icon to choose a lighting effect for audio playback.

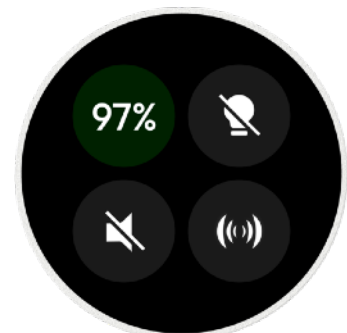

Choose **Static**, **Dynamic** or **Custom**.

For custom lighting, select **Custom**, then swipe up to adjust the color and brightness.

Quick Actions Menu

From the standby screen, swipe down to open **Quick Controls**.

View Dial's battery level at a glance. Tap an icon to turn the speaker lights on or off, mute or unmute the speakers, or start **Sound Optimization**

Make it yours

Change the standby theme

Touch and hold the standby screen to open the theme picker.

Swipe left or right to browse the available themes, then tap one to apply it.

Sound Optimization

Before you start: Place the speakers symmetrically on a level surface and keep the room as quiet as possible.

Swipe left or right to **More Settings** and select **Room Calibration**, or open it from **Quick Controls**. Tap **Start Calibration** to begin.

Room Calibration measures and compensates for the effects of your desk and room on the sound. The adjustments take effect as soon as calibration is complete.

More settings

Swipe left or right to **More Settings**. Turn the Dial or swipe up or down to browse, then tap an option to open it.

Options include **Sound Optimization**, **Standby Timeout**, **Language**, **Factory Reset** and **About Dial**.
